

GitHub is a remote repository &

Workspace/Local Repository - is computer project folder.

Stage has 3 states: modified, staged, committed.

How Github Works &

= git fetch & git merge

Step-01: `git branch <branch-name>` // Create A Branch

Step-02: `git checkout <branch-name>` // switch To branch name.

Step-03: `git merge <branch-name>` // name of the current branch.
